

With this bulletin, we are offering lists of products approved and denied by OEFFA for use in organic production as an additional service to our certified growers. Products on the approved list are allowed for their intended use only and must be used in accordance with your approved organic system plan and according to the manufacturer’s directions. Please also note restrictions on the use of some products. Products on the denied list are not currently allowed for any use. These lists should not be interpreted as an endorsement or indictment of any specific product, group of products, or manufacturer, nor should they be considered as complete or exhaustive. As growers and manufacturers request reviews of additional products, they will be added to the approved or denied list, accordingly. These lists are subject to change if the formulations of products, the NOP regulations, or interpretations thereof change. If you have any concerns, questions, or would like to request review of a specific product or application, please contact Andy Hupp at materialsreview@oeffa.org or (614) 262-2022.

Approved Products

Product Name	Manufacturer and/or Distributor	NOP Restrictions
5-3-4	McGeary Organics	
0-0-22 Sulphate of Potash Magnesium	Chesapeake Fertilizer	
0-0-5- Potassium Sulfate	Ohio Earth Foods
